

BRADNER FENCING BUYS BRYCE ...AGAIN

**DB FENCING
CONTRACTORS ARE
BASED NEAR EXETER
AND COVER THE WHOLE
OF THE SW RIGHT DOWN
TO LIZARD POINT.**

They use Bryce post drivers and think they are "a proper job".

When we caught up with Dave Bradner he was greasing up his latest purchase , the New Bryce 180 Pro - more on that later.

Dave erects many different fence types, most of which are made up of deer fencing and agricultural H/T stock net.

"I started off with a basic Bryce Profi Supreme and then added a little towable tracked machine. This did the job fine on lighter duties but we needed to up our game to increase output so in the meantime I made the decision to supplement this 12 months ago with a Bryce Magnum, with an eye on some type of heavier tracked machine further down the line. I take what I think is a professional approach to the job, sourcing

the best materials and the best equipment. We have a heavy workload and a tight schedule and we need equipment that is high performance, simple to use and trouble-free."

"The Magnum made a huge difference in terms of hitting power and output, with the auto tele- mast, rockspike system and quadshift deserving a special mention. This really is the bees knees of the tractor-mounted machines - it's well put together and the cycle times between driving strainers or stakes is really really quick and has boosted our output significantly, which in turn helps with increased profits. We of course use the Magnum for all the heavy work and hard ground followed by the little tracked machine for all the line posts. This combination worked well but it was a compromise because we had to pick and choose between jobs and decide on which machine to send where. We had to resolve this so I took a fresh look at all the one man tracked machines on the market, asked questions, looked and listened to what other users had to say. At the end of the day it came down to the Bryce 180 Pro, and after a number of conversations and a bit of thinking, I placed an order and received my new machine in June.

The Bryce 180 Pro erecting deer fencing to the left and stock fencing on the right

The Bryce Magnum driving a deer fence straining post

It was worth the wait, it was just what I expected - awesome. It is well thought out and beautifully balanced, everything about it is just so good. The build quality is of the highest order and it is definitely designed by a man that knew what he was doing."

"What we have now are two extremely capable machines with the same hitting power that allow us to go anywhere and tackle anything, and any member of our 3 man team can use either machine with ease and simplicity. With the ultra compact dimensions of the 180 Pro and its 180 degree operating capability, it means we can get into the most awkward confined situations

jimaginable, get the job done, no sweat - end of story."

A fair summary of the Bryce 180 Pro was when Dave quoted "one day last week we went to put up a 560mt H/T stock fence and between 1.30pm and just on 5pm I drove in 35 strainers and all the line posts - that quite simply sums up the capability of one man using the Bryce 180 Pro."
